**Tunnels use a minimum of 0.6 gallons
of fresh water per pound of goods**

«««PulseFlow®
TECHNOLOGY

Tunnels use as little as 0.3 gallons
of fresh water per pound of goods**

Once again Milnor has revolutionized continuous batch washing—this time with its exclusive PulseFlow* Technology. PulseFlow tunnels combine the innovative RecircONE® pump arrangement that wets down goods quickly, with high velocity rinsing for outstanding results. PulseFlow tunnels still employ traditional True Top Transfer, but use standing bath washing, and intermittent counterflow in every process module. Dedicated rinse modules are eliminated, saving thousands of gallons of fresh water every day. Thanks to PulseFlow Technology, the water is used far more efficiently.

How do you get your goods cleaner, faster using half as much water? Using less. Cleaning more. The only answer is the PulseFlow Technology tunnel—only available from Milnor.

Contact an authorized Milnor distributor or call 504-712-7656 to find out more.
