Pellerin Milnor Introduces NEW RinSave™ Water Saving Feature for V-Series Washer-Extractor line

Pellerin Milnor's V-Series washer-extractors, with 40-160 lb. (18-72 kg) capacities, now feature NEW RinSave™ water saver software that eliminates excessive rinse and intermediate extract steps. This innovative process allows a precise high G-Force to "sling" the wash liquor (including water, chemistry, and soil) out of the goods between the last wash step and following rinse cycle. Milnor's V-Series washer-extractors with RinSave software *conserve* water use *without* compromising superior wash quality.

RinSave water saver software replaces as many as two rinse steps and saves up to 10 minutes per load. No matter what capacity, Milnor's V-Series washer-extractors with RinSave software will reduce water consumption up to 0.4 gallons/lb. of goods processed. These industrial washer-extractors will *save you money* each and every time you run them.

RinSave water saving feature can be retrofitted in certain existing Milnor V-Series machines. For more information about RinSave and other utility saving features of Milnor machinery, contact an Authorized Milnor distributor or call Milnor at 1-800-469-8780, and visit www.milnor.com.
